November 4 2002 - Superb Internet® Introduces Solaris 9 “Ahead of the Rest”®

Washington, DC – November 4, 2002

Superb Internet Corporation, a world leader of quality managed hosting and e-commerce solutions, announced today that in their latest Internet survey, Netcraft, a leading Internet security company, announced that Superb Internet, once again leading the way in the hosting industry, now hosts more web sites using the latest version of Solaris 9 Operating Environment than the rest of the Internet combined.

According to Haralds Jass, President & CEO of Superb Internet Corp., "While many in the hosting industry, in an attempt to cut all possible costs, move towards lower-cost operating systems such as Linux or FreeBSD, we have always believed that the key to reliability and quality is a stable, proven combination of superior connectivity and the highest quality hosting environment. We feel strongly that while there may be cheaper operating systems out there, the proven reliability and strength of Sun Solaris OS is the optimum choice for those companies seeking to host mission critical sites. True to our motto, 'Ahead of the Rest'®, we have upgraded our entire Unix virtual hosting environment to the latest version of Solaris 9."

In fact Netcraft in their September survey had previously reported that Solaris 9, released in May this year, was apparently running on smaller number of web site IP addresses than had been previously anticipated. However in October's survey, Netcraft reports that Superb Internet is running more web sites on the Solaris 9 Operating Environment than the rest of the entire Internet combined.

"In our continuous pursuit of improving service to our hosting customers, we moved quickly to upgrade all Unix servers to the newest, best performing, and most secure version of Solaris. Among the chief improvements of this latest OS are thread improvement and the 64-bit computing environment," states Lu Vo, VP of R&D at Superb Internet Corp. "Additionally in conjunction with this latest offering, we will be upgrading many other related software and utilities such as Perl, Tomcat, IDK, etc.", remarks Mr. Vo.

About Superb Internet Corp.

Since 1996, Superb Internet has been consistently rated as one of the very best web hosts by all web host rating agencies, such as Web Hosting Magazine, in all areas, especially customer support and reseller services. Superb Internet provides a complete range of managed web hosting services, from virtual hosting through to high-volume, mission-critical dedicated service solutions.
